Education

GCUF

BS in Computer Science, GPA: 3.01/4.0

Nov 2017 - Dec 2021

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Systems, Software Engineering, Operating Systems, Computer Networks

Contributed to GCUF Debating Society through active participation in debates, event coordination, and academic activities (20 hours/week)

Technical Skills & Projects

Programming Languages: Python, JavaScript, TypeScript

Manual & Automation: Manual Testing, Test Case Design & Execution, Functional Testing, Regression Testing, Smoke Testing, Sanity Testing, Defect Reporting & Bug Tracking, WebdriverIO, Selenium concepts, API Testing, UI Automation, Cross-browser Testing, Smart UI Visual Testing

Frameworks & Tools: Node.js, Chai, Mocha, REST API testing tools, reusable test utilities, Postman

CI/CD & DevOps: CI/CD pipelines, GitHub Actions, Jenkins basics, automated test execution workflows

Cloud & Infrastructure (Exposure): AWS (basic), Docker (basic), LambdaTest, cloud-based test execution

Version Control & Tools: Git, GitHub, Jira, Agile/Scrum methodologies

Enterprise Test Automation – Travel Platforms (KAYAK, Momondo, HotelsCombined)

Designed and maintained scalable end-to-end automation frameworks for high-traffic travel platforms. Built robust UI and API test coverage using WebdriverIO and TypeScript, ensuring cross-browser consistency and release stability across Chrome, Firefox, Edge, and Safari environments. Improved CI reliability by identifying and fixing flaky tests and optimizing test execution workflows.

HireStream – Enterprise ATS Automation Platform

Built automation coverage for a full-scale Applicant Tracking System (ATS), including candidate management, job workflows, form submissions, settings modules, and email-based flows. Implemented API-driven test data setup to improve execution efficiency and reduce dependency on UI workflows. Enhanced regression stability through reusable automation architecture and structured test design.

Migration & Framework Modernization (Protractor → WebdriverIO)

Contributed to migration of legacy automation suite from Protractor to WebdriverIO, improving maintainability, scalability, and execution performance. Refactored test architecture, introduced reusable utilities, and reduced flakiness across existing test suites.

CI/CD & Cross-Browser Testing Infrastructure

Implemented cross-browser automation strategy using LambdaTest across multiple environments (Windows, macOS, iOS). Integrated automation execution into CI/CD pipelines to ensure continuous validation and faster feedback cycles. Improved overall release confidence through stable and repeatable test execution.

Relevant Experience

Arbisoft

Automation Engineer

Onsite

June 2023 - Present

Building scalable test automation systems for high-traffic travel platforms and enterprise applications including KAYAK, Momondo, HotelsCombined, Mundi, and HireStream.

- Built and scaled enterprise-grade end-to-end automation frameworks using WebdriverIO and TypeScript, significantly improving test coverage across critical user journeys

- Delivered automation coverage for HireStream (ATS platform), including candidate management, job creation, forms, settings, and email-based workflows
- Stabilized CI/CD pipelines by resolving 100+ flaky and quarantined tests through root-cause analysis, improving build reliability and reducing false failures
- Improved regression execution efficiency by introducing reusable automation utilities and optimized test architecture
- Implemented cross-browser automation strategy across Chrome, Firefox, Edge, Safari (macOS and iOS) using LambdaTest
- Introduced Smart UI visual regression testing to detect UI inconsistencies before production releases
- Led migration of 50+ test cases from Protractor to WebdriverIO, modernizing the automation stack and improving maintainability
- Improved release confidence by increasing automation reliability across high-traffic production systems
- Collaborated with engineering teams to identify and prevent production-level defects through automated test pipelines

Arbisoft

E-Learning Technical Developer (QA & Testing)

Onsite

June 2022 - May 2023

- Performed functional and end-to-end QA testing of interactive eLearning modules delivered for enterprise learning programs, including McKinsey Academy, ensuring content accuracy, usability, and system reliability
- Validated learning workflows, navigation paths, and course functionality across LMS and CMS platforms to ensure consistent learner experience
- Identified, documented, and tracked defects through structured QA processes, supporting continuous improvement and stable releases
- Conducted UI and content validation to ensure consistency, accessibility, and alignment with instructional and business requirements
- Supported release testing and deployment validation across multiple learning environments, ensuring smooth content delivery
- Collaborated with developers, instructional designers, and stakeholders to improve quality and resolve issues across digital learning systems

Ewig Life

Junior App Developer

Onsite

Feb 2021 - May 2022

- Developed cross-platform mobile applications using Flutter and Dart, delivering consistent user experiences across Android and iOS platforms.
- Implemented core application features including user authentication, API integrations, and real-time data handling to support business requirements.
- Collaborated with development teams to build, test, and enhance mobile application functionality, improving overall application stability and performance.
